**AMENDMENT**

**To the Claims:**

**1-24 (cancelled).**

25. (currently amended) A chip with polymer thereon, comprising at least:

a chip having an active surface;

a polymer, disposed at periphery of the active surface of the chip extending to sidewalls of the chip; and

a plurality of wires electrically connecting the chip and a carrier for carrying the chip, wherein a portion of each the wires near the active surface of the chip is covered by the polymer and the other portion of the wires is exposed outside of the polymer.

**26-27. (cancelled)**

28. (original) The chip with polymer thereon of claim 26, wherein the polymer further covers a portion of the carrier.

29. (original) The chip with polymer thereon of claim 26, wherein the carrier comprises a leadframe or a circuit substrate.

30. (original) The electrical package structure of claim 25, wherein the polymer is shaped as a ring covering whole periphery of the active surface of the chip.

31. (original) The electrical package structure of claim 25, wherein the polymer is shaped as strips covering two opposite edges of the active surface of the chip.

Docket No.: 13365-US-PA

32. (original) The electrical package structure of claim 25, wherein the polymer is shaped as a plurality of pieces covering four corners of the active surface of the chip.

33. (original) The electrical package structure of claim 25, wherein the polymer comprises a stress buffer polymer.

34. (original) The electrical package structure of claim 33, wherein the stress buffer polymer comprises epoxy resin or polyimide.
